Supplementary Fig. 2. Correlations between pretreatment platelet count and maximum TNSr (A), FACT-GOG-NTx (B), and PHQ-9 (C) scores in patients. The graphs include linear regression lines for the relationships between the pretreatment platelet count and the maximum TNSr ($r=0.1$, $p=0.49$), FACT-GOG-NTx ($r=0.17$, $p=0.242$), and PHQ-9 ($r=0.17$, $p=0.22$) scores. FACT-GOG-NTx: Functional Assessment of Cancer Therapy/Gynecologic Oncology Group-Neurotoxicity, PHQ-9: Patient Health Questionnaire-9, TNSr: reduced version of the Total Neuropathy Score.
